bond_set_slave_state

```
graph LR; A[bond_set_slave_active_flags] --> C[bond_set_slave_state]; B[bond_set_slave_inactive_flags] --> C;
```

The diagram illustrates a logical relationship where two separate flag variables, 'bond_set_slave_active_flags' and 'bond_set_slave_inactive_flags', both contribute to or determine the value of a single state variable, 'bond_set_slave_state'. The state variable is highlighted with a gray background, while the flag variables are in white boxes. Blue arrows indicate the direction of influence from the flags to the state.
