

ZSTD_compress_usingDict

ZSTD_compressCCtx

ZSTD_compress_internal

```
graph LR; A[ZSTD_compress_usingDict] --> C[ZSTD_compress_internal]; B[ZSTD_compressCCtx] --> C;
```

The diagram illustrates a dependency or implementation relationship. Two functions, `ZSTD_compress_usingDict` and `ZSTD_compressCCtx`, are shown on the left. Arrows from both of these functions point to a single function, `ZSTD_compress_internal`, which is highlighted with a gray background. This suggests that the internal function is the core implementation that both public-facing functions rely on.
