

curve25519_compute
_shared_secret

curve25519_generate
_public_key

curve25519_set_secret

kpp_tfm_ctx

```
graph LR; A[curve25519_compute_shared_secret] --> D[kpp_tfm_ctx]; B[curve25519_generate_public_key] --> D; C[curve25519_set_secret] --> D;
```

The diagram illustrates a data flow where three separate functions on the left are used to initialize a single context object on the right. The functions are arranged vertically: 'curve25519_compute_shared_secret' at the top, 'curve25519_generate_public_key' in the middle, and 'curve25519_set_secret' at the bottom. Each function has a blue arrow pointing towards a gray rectangular box labeled 'kpp_tfm_ctx'. The arrows from the top and bottom functions converge towards the middle of the box, while the arrow from the middle function points to its top edge.
