

syscall_exit_to_user_mode

syscall_exit_to_user
_mode_work

__syscall_exit_to_user
_mode_work

```
graph LR; A[syscall_exit_to_user_mode] --> C[__syscall_exit_to_user_mode_work]; B[syscall_exit_to_user_mode_work] --> C;
```

The diagram illustrates a pointer relationship between three function names. On the left, there are two white rectangular boxes. The top box contains the text 'syscall_exit_to_user_mode'. The bottom box contains the text 'syscall_exit_to_user' followed by '_mode_work' on a new line. On the right, there is a gray rectangular box containing the text '__syscall_exit_to_user' followed by '_mode_work' on a new line. Two blue arrows originate from the right side of the two white boxes and point towards the left side of the gray box, indicating that both functions on the left point to the same target function on the right.
