

SYSCALL_DEFINE1

acct_on

mnt_clone_internal

```
graph LR; A[SYSCALL_DEFINE1] --> B[acct_on]; B --> C[mnt_clone_internal];
```

The diagram illustrates a sequence of three components connected by arrows. The first component, 'SYSCALL_DEFINE1', is in a white box. An arrow points to the second component, 'acct_on', also in a white box. A second arrow points from 'acct_on' to the third component, 'mnt_clone_internal', which is in a gray box. This visualizes a flow or dependency from the macro to the function, and then to the internal function.
