

bpf_map_offload_map_free

bpf_offload_dev_netdev
_unregister

__bpf_map_offload_destroy

```
graph LR; A[bpf_map_offload_map_free] --> C[__bpf_map_offload_destroy]; B[bpf_offload_dev_netdev_unregister] --> C;
```

The diagram illustrates a mapping or delegation of functionality. Two source functions, 'bpf_map_offload_map_free' and 'bpf_offload_dev_netdev_unregister', are shown on the left. Arrows from both point to a single target function, '__bpf_map_offload_destroy', which is highlighted with a gray background. This suggests that both source functions are implemented by or delegate to the target function.
