bytes_to_frames

```
graph LR; A[ snd_pcm_indirect_capture_pointer ] --> C[ bytes_to_frames ]; B[ snd_pcm_indirect_playback_pointer ] --> C;
```

The diagram illustrates a functional relationship where two pointers, `snd_pcm_indirect_capture_pointer` and `snd_pcm_indirect_playback_pointer`, are used to invoke the `bytes_to_frames` function. The pointers are represented by white rectangular boxes on the left, and the function is represented by a gray rectangular box on the right. Two blue arrows originate from the right side of each pointer box and point directly to the left side of the `bytes_to_frames` box, indicating that both pointers serve as arguments for this function.
