

SYSCALL\_DEFINE1

SYSCALL\_DEFINE2

destroy\_swap\_extents

```
graph LR; A[SYSCALL_DEFINE1] --> C[destroy_swap_extents]; B[SYSCALL_DEFINE2] --> C;
```

The diagram illustrates a mapping from two different syscall definitions to a single function. On the left, there are two white rectangular boxes with black borders. The top box contains the text 'SYSCALL\_DEFINE1' and the bottom box contains 'SYSCALL\_DEFINE2'. On the right, there is a gray rectangular box with a black border containing the text 'destroy\_swap\_extents'. Two blue arrows originate from the right side of the left boxes and point towards the left side of the gray box, indicating that both 'SYSCALL\_DEFINE1' and 'SYSCALL\_DEFINE2' are associated with or point to the 'destroy\_swap\_extents' function.
