

usb_endpoint_is_isoc_in

usb_endpoint_is_isoc_out

usb_endpoint_xfer_isoc

```
graph LR; A[usb_endpoint_is_isoc_in] --> C[usb_endpoint_xfer_isoc]; B[usb_endpoint_is_isoc_out] --> C;
```

The diagram illustrates a logical relationship between three USB endpoint-related variables. On the left, there are two white rectangular boxes with black borders. The top box contains the text 'usb_endpoint_is_isoc_in' and the bottom box contains 'usb_endpoint_is_isoc_out'. On the right, there is a single gray rectangular box with a black border containing the text 'usb_endpoint_xfer_isoc'. Two blue arrows originate from the right side of the two white boxes and point towards the left side of the gray box, indicating that the two input variables are combined to determine the output variable.
